Introduction

This bibliography includes English language books, Ph.D. dissertations, and working papers that were published between 1994 and 2009. The term “global financial crisis” is applied in a very broad context focusing on the factors that caused financial turmoil in several countries and its impact. Some of the studies draw comparisons between two or more countries while others focus specifically on a single country. Several publications seek to explain currency crisis by employing theoretical models, or empirical-based conclusions.

The databases used to compile this bibliography are:
